## Why Ceramics?

### CERAMIC BEARINGS

Ceramic balls can be made to a much more exact roundness than steel balls. The balls have a micron finish. This creates less friction and, in turn, much more speed. Ceramic balls are harder than steel balls making them almost impervious to flat spotting and gives them a longer life than steel balls. Combined with this low friction and 2.5 balls in the load zone, these are the strongest, fastest, bearings you can buy. Available in A.B.S. & 8 Ball Cheetahs.
